

Sand box

A sand box is necessary for storing sand at fire control stations indoors or outdoors. It is equipped with handles for quick carrying to the fire location and can have different internal volumes.

The sand box is painted red for better visibility and is made of steel sheet with a polymer powder coating to protect against corrosion. The sand box cover plate protects the sand from the impact of the environment. The sand is effective in extinguishing oil products and other flammable liquids.

The sand box is used with fire racks or stands with fire-fighting equipment, for greater efficiency and mobility.

Product code: 1818101100

Specifications:

- Material - steel sheet 1.5/2 mm;
- Color - red;
- Internal volume of the box - 1 m³; 0.5 m³; 0.3 m³;
- Box 0.3 m³:
 - Weight - 34 kg;
 - Overall dimensions - 1000x600 x700 mm;
- Box 0.5 m³:
 - Weight - 54 kg;
 - Overall dimensions - 730x1250x630;
